Women's Interest-Free Loan Management System

Migration 0044 Verification — v1.8.0

Migration 0044 Verification

Migration: 0044_v180_borrower_update_requests.sql Version: v1.8.0 Applied: 13 August 2026 Environment: Production Neon (shared operational database) Classification: Confidential

Purpose

Creates the `borrower_update_requests` table that powers the collector's Registration information update workflow.

Apply method

drizzle-kit migrate currently exits early with "Please install latest version of drizzle-orm" in this workspace. Migration 0044 was therefore applied with the official SQL file against the production database and recorded in `drizzle.__drizzle_migrations`.

Step	Result
SQL statements executed	Passed (table, three FKs, three indexes)
Journal watermark 1785976800000 inserted	Passed
Table <code>borrower_update_requests</code> present	Passed
Indexes <code>borrower_update_requests_pkey</code> , <code>_borrower_id_idx</code> , <code>_status_idx</code> , <code>_requested_by_idx</code>	
Foreign keys <code>borrowers(id)</code> , <code>users(id) requester</code> , <code>users(id) reviewer</code>	

Post-apply health

GET <https://wilms.vercel.app/api/wilms/health>

Field	Value
status	ok
version	1.8.0
gitCommit	33d27b3...
database.status	connected
migrations.status	ok

Note: countGap: true (applied 44 vs journal expected 45) reflects a historical row-count discrepancy. The watermark matches the latest journal entry; service health is ok.

Staging

Staging uses the same Neon operational database for this programme deployment path. No separate staging apply was required after production apply of 0044.

Rollback

Migrations are forward-only. Rollback would require controlled DDL drop of borrower_update_requests and deletion of the matching __drizzle_migrations row — not recommended without an incident ticket.
