

WILMS

Women's Interest-Free Loan Management System

WILMS v1.8.1 Production Maintenance Report — v1.8.1

WILMS v1.8.1 — Production Maintenance Report

Release identity: v1.8.1 Release type: Production-safe maintenance Date: 15 August 2026 GhanaPost GPS: not included

Merge details

| Field | Value |

|-----|-----|

| PR | <https://github.com/e-mond/WILMS/pull/206> |

| Merge commit | 08d9c6d2981156dd4a136c408d856d1a8be3a82d |

| Feature branch | hotfix/v1.8.0-settings-notifications-borrower-records |

| Tag | v1.8.1 |

Deployment details

| Field | Value |

|-----|-----|

| Production URL | <https://wilms.vercel.app> |

| GitHub deployment ID | 5921969327 |

| Vercel log URL | <https://wilms-cmb05uqn9-emonds-projects.vercel.app> |

| Production SHA | 08d9c6d2981156dd4a136c408d856d1a8be3a82d |

| Health version | 1.8.1 |

| Health status | ok |

| Database | configured, connected |

| Mail | Gmail configured |

| SMS | smsnotifygh configured |

| Scheduler | HTTP-triggered |

| Push | optional (VAPID not required for this maintenance slice) |

CI results (PR #206)

| Check | Result |

|-----|-----|

| validate | pass (6m58s after blacklist route fix) |

| security | pass |

| GitGuardian | pass |

| Vercel preview | pass |

First validate run failed on static API integrity (PATCH /borrowers/:id/blacklist missing). Route was added in da1950d and checks went green.

Local gates

| Gate | Result |

|-----|-----|

| type-check | pass |

| lint | pass |

| frontend tests | pass |

| domain tests | pass (two 15s timeouts under load retried in isolation and passed) |

| build | pass |

Smoke-test evidence

Unauthenticated production

| Check | Result |

|-----|-----|

| GET /api/wilms/health | ok, version 1.8.1, SHA 08d9c6d... |

| Login page | 200, label WILMS v1.8.1 |

| /records | 307 to auth (expected) |

| Demo login without CSRF | rejected (expected) |

Authenticated workflow smoke (operator required)

The following items are implemented and covered by unit/integration tests, but live SMS / assignment / records UI on production requires programme-operator credentials. Demo users are blocked in production.

| Workflow | Engineering evidence | Live operator smoke |

|-----|-----|-----|

| Settings enforcement / group capacity | Domain getGroupSizeLimits; approver UI disables full groups | Pending operator |

| Community Formation Queue | Formation service uses stored min/max | Pending operator |

| Registration / Approver location hierarchy | Review panels already show cascade | Pending operator |

| Notification timing | notifyBorrower only when approved | Pending operator |

| Rejection / blacklist / escalate SMS | Event dispatch + PATCH blacklist route | Pending operator |

| Borrower Record Centre | /records routes + domain search | Pending operator |

| Guarantor SMS | Loan approve / close / missed >2 | Pending operator |

| Loan workflow stepper | Public step sequence tests | Pending operator |

| Exports | Existing branded filename tests | Pending operator |

Issues fixed

- Settings enforcement (group min/max, max loan)
- Group capacity validation
- Community Formation Queue
- Location hierarchy on registration and approver review
- Borrower Record Centre
- Collector profile live data
- Readable identifiers
- Loan workflow stepper
- Notification timing (no SMS on pending group assignment)
- Borrower rejection / blacklist / escalation notifications
- Guarantor notifications
- Export improvements retained
- GPS placeholder reverse geocode without GhanaPost
- Missing PATCH /borrowers/:id/blacklist route (CI + production parity)

Remaining deferred items

- Official GhanaPost GPS API (planning: documentation/location/GHANAPOST_GPS_INTEGRATION_PLAN.md)
- Collector expense-submitted count stub

- Operator-run authenticated SMS and assignment smoke on production

- No schema migration in this release

Production confidence

90 / 100 for engineering and unauthenticated production identity. Withhold WILMS v1.8.1 Production Certified until the programme owner completes the authenticated SMS / capacity smoke checklist above.

Recommendation: declare engineering-complete and production-deployed. Certification after operator smoke.
